EXPERIENCE

CACI | Cyber Engineer **April 2026 – October 2026**

- Deployed and configured Tenable Security Center with Nessus scanners running as Podman containers, performing ACAS and vulnerability scans across 10+ hosts
- Developed Ansible playbooks to automate Tenable VM provisioning and Nessus container deployment, reducing deployment time from hours to minutes
- Deployed Evaluate-STIG, SCAP Compliance Checker (SCC), and ZAP scans to assess STIG compliance and web application security, automating weekly Evaluate-STIG scans with Bash and cron
- Scanned software packages with JFrog Xray, using contextual analysis to prioritize vulnerabilities that were actually exploitable
- Triaged Evaluate-STIG findings into remediation tasks and hardened environments against DISA STIG baselines
- Authored Policy as Code for Kubernetes using Kyverno, with Ansible playbooks enforcing file-level system controls outside Kyverno's scope, to meet the Kubernetes STIG SCAP and CIS benchmarks; designed for reuse on future clusters
- Built a single-page web application (Flask and Paramiko backend, REST API, vanilla JavaScript, HTML5, CSS3) centralizing scanner status, latest scan results, and plugin updates into one dashboard

Applied Materials | Engineering Technician **November 2024 – April 2026**

- Conducted performance and quality testing on complex machinery and systems, ensuring compliance with industry and customer standards
- Troubleshot and resolved component and system failures by performing root cause analysis

CenterPoint Energy | Programmer Analyst Intern, *CS Development and Integration* **February 2022 – August 2022**

- Automated security tasks, password updates, and compliance reports with PowerShell, Bash, Python, and Windows Scheduler, reducing manual work by 10+ hours per week
- Administered user/group permissions in Active Directory and Group Policies, enforcing least privilege principles
- Built and configured 50+ secure workstations aligned with enterprise security standards while minimizing downtime

Texas Army National Guard | Intelligence Analyst **April 2016 – April 2022**

- Performed in-depth analysis of multi-source intelligence to identify emerging cyber and physical threats, providing leadership with actionable risk assessments
- Maintained intelligence repositories, ensuring data integrity, secure handling of sensitive information, and rapid retrieval for threat investigations
- Produced comprehensive threat intelligence reports and visualizations tailored for both executive decision-makers and technical security teams
- Held Top Secret Security Clearance (Expired 2022)

EDUCATION

University of Houston **May 2023**

Bachelor of Science in Computer Science, Minor in Mathematics

Cumulative GPA: 3.36/4.00 | Computer Science GPA: 3.48/4.00

CERTIFICATIONS

- Certified Professional Penetration Tester (eCPPT), CompTIA Security+ (Sec+), Junior Penetration Tester (eJPT)
- In Progress: Offensive Security Certified Professional (OSCP), Cybersecurity Analyst (CySA+)

SKILLS

- Programming & Scripting: Python, Bash, PowerShell, C/C++, Java, JavaScript, SQL, HTML/CSS, Assembly (x86/ARM)
- Security Tools & Practices: Vulnerability Assessment, STIG/CIS Compliance, Penetration Testing, Reverse Engineering, Web Security | Tenable Security Center (ACAS), Nessus, JFrog Xray, Evaluate-STIG, SCC, ZAP, Burp Suite, Metasploit, Nmap, Wireshark, Ghidra, IDA, Nikto
- Systems & Automation: Linux, Windows, macOS | Ansible, Kubernetes, Kyverno, Docker, Podman, Virtual Machines | Flask, REST APIs | Active Directory, Group Policies

PROJECTS & OTHER EXPERIENCE

- Capture the Flag (CTFs) and Security Projects: Regular participant on HackTheBox and TryHackMe while building custom labs and small-scale applications to practice exploitation, reverse engineering, cryptography, and defensive techniques
- Containerized Security Testing: Actively search for vulnerabilities in open-source projects hosted on DockerHub. Use Docker containers to isolate and test applications in controlled environments, ensuring safe and repeatable security research
